

Rogers AI Global Macro ETF

Summary Prospectus
June 11, 2018

www.bikretf.com

Before you invest, you may want to review the Rogers AI Global Macro ETF's (the "Fund") statutory prospectus and statement of additional information, which contain more information about the Fund and its risks. The current statutory prospectus and statement of additional information dated June 8, 2018, are incorporated by reference into this Summary Prospectus. You can find the Fund's statutory prospectus, statement of additional information and other information about the Fund online at www.bikretf.com. You can also get this information at no cost by calling 1-844-ETFMGRS (383-6477) or by sending an e-mail request to info@etfmg.com.

Investment Objective

The Rogers AI Global Macro ETF (the "Fund") seeks to provide investment results that, before fees and expenses, correspond generally to the total return performance of the Rogers AI Global Macro Index (the "Index").

Fees and Expenses

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund. The fees are expressed as a percentage of the Fund's average daily net assets. This table and the Example below do not include the brokerage commissions that investors may pay on their purchases and sales of Fund shares.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.75%
Distribution and Service (12b-1) Fees	None
Other Expenses*	0.00%
Acquired Fund Fees and Expenses*	0.43%
Total Annual Fund Operating Expenses	1.18%

* Based on estimated amounts for the current fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. This Example does not include the brokerage commissions that investors may pay on their purchases and sales of Fund shares. Although your actual costs may be higher or lower, based on these assumptions your cost would be:

1 Year	3 Years
\$120	\$375

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when the Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund uses a "passive" or indexing approach to try to achieve its investment objective. Unlike many investment companies, the Fund does not try to "beat" the Index and does not seek temporary defensive positions when markets decline or appear overvalued other than those indicated in the Index.

The Fund will use a replication strategy. A replication strategy is an indexing strategy that involves investing in the securities of the Index in approximately the same proportions as in the Index. However, the Fund may utilize a representative sampling strategy with respect to the Index when a replication strategy might be detrimental to shareholders, such as when there are practical difficulties or substantial costs involved in compiling a portfolio of equity securities to follow the Index, in instances in which a security in the Index becomes temporarily illiquid, unavailable or less liquid, or as a result of legal restrictions or limitations (such as tax diversification requirements) that apply to the Fund but not the Index.

The Rogers AI Global Macro Index

The Index was developed in 2018 by Ocean Capital Advisors®, LLC, the Fund's index provider ("Ocean"). Ocean is led by its Chairman, Jim Rogers, a well-known stock market and commodities investor and bestselling author. The Index tracks the performance of single-country (including emerging markets) exchange-traded funds ("ETFs") that each track a broad-based index composed of equity securities primarily listed on an exchange in the applicable country (collectively, the "Underlying ETFs") or an ETF tracking the 1-3 year U.S. Treasury Bond market (a "Treasury ETF").

The underlying index of each single-country Underlying ETF included in the Index may include equity securities of small-, mid-, and large-capitalization companies, and such equity securities are expected to have exposure to a wide range of industries reflective of the economy of the applicable country. The Index includes a single Underlying ETF per country. Each eligible Underlying ETF is specified in the Index's rules, and the Underlying ETFs generally reflect the ETF with the broadest exposure to equity securities in the applicable country and meeting certain minimum investibility criteria.

The allocation of the Index's weight among the Underlying ETFs or Treasury ETF is based on a proprietary artificial intelligence-driven algorithm (the "Model") that analyzes macroeconomic data (e.g., volatility, interest rates, productivity, gross national product) monthly to identify likely changes in market directions in individual countries and within the global economy. The Model uses objective data to calculate the magnitude and probability of such market movements over an approximately 18-month period, while seeking to identify any "micro-cycles" that might develop in shorter time periods, to determine the optimal investment allocations based on the relative expected performance of the market in each country in the Index universe. The Model's bias toward longer-term market movements is generally expected to minimize turnover at the time of each rebalance.

When the Model determines to reduce or eliminate exposure to a country, the reduction to such allocation (whether all or a portion of the country's allocation in the Index) is replaced with the Treasury ETF. From time to time the Index may be significantly allocated to the Treasury ETF.

The Index is rebalanced as of the first business day of each month using data as of the last business day of the previous month. The weight of each country is capped at 10% at the time of each rebalance of the Index, with any excess weight reallocated equally to each other country included in the Index. At the time of each rebalance, the Index will have a positive allocation to at least twenty individual countries.

The Index was developed by Ocean for purposes of creating the Fund. The Index is calculated and maintained by Solactive AG, an independent third-party calculation agent.

As of June 4, 2018, the Index consisted of single-country ETFs representing 39 countries. The four largest country allocations in the Index were Brazil (7.15%), South Korea (4.17%), Hong Kong (3.96%), and Mexico (3.54%), and 24.65% was allocated to the Treasury ETF.

The Fund's Principal Investment Strategies

Under normal circumstances, at least 80% of the Fund's total assets (exclusive of collateral held from securities lending) will be invested in (i) the Underlying ETFs included in the Index or (ii) the constituent securities (or depositary receipts representing such securities) of such Underlying ETFs in the same approximate weight as such Underlying ETFs or their constituent securities are included in the Index.

Correlation: Correlation is the extent to which the values of different types of investments move in tandem with one another in response to changing economic and market conditions. An index is a theoretical financial calculation, while the Fund is an actual investment portfolio. The performance of the Fund and the Index may vary somewhat due to transaction costs, asset valuations, foreign currency valuations, market impact, corporate actions (such as mergers and spin-offs), legal restrictions or limitations, illiquid or unavailable securities, and timing variances.

The Fund's investment adviser expects that, over time, the correlation between the Fund's performance and that of the Index, before fees and expenses, will exceed 95%. A correlation percentage of 100% would indicate perfect correlation. If the Fund uses a replication strategy, it can be expected to have greater correlation to the Index than if it uses a representative sampling strategy.

Industry Concentration Policy: The Fund will concentrate its investments (*i.e.*, hold more than 25% of its net assets) in a particular industry or group of related industries to approximately the same extent that the Index is concentrated.

Principal Risks

As with all funds, a shareholder is subject to the risk that his or her investment could lose money. The principal risks affecting shareholders' investments in the Fund, (either directly or through the Fund's investments in the Underlying ETFs), are set forth below. An investment in the Fund is not a bank deposit and is not insured or guaranteed by the FDIC or any government agency.

Emerging Markets Securities Risk: The Fund's investments may expose the Fund's portfolio to the risks of investing in emerging markets. Investments in emerging markets are subject to greater risk of loss than investments in developed markets. This is due to, among other things, greater market volatility, lower trading volume, political and economic instability, greater risk of market shutdown and more governmental limitations on foreign investments than typically found in developed markets. In addition, less developed markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by local banks, agents and depositories.

Equity Market Risk: The equity securities held in the Fund's portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, or sectors in which the Fund invests such as political, market and economic developments, as well as events that impact specific issuers.

Fixed Income Risk: The value of the Fund's investments in fixed income securities will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities owned by the Fund. On the other hand, if rates fall, the value of the fixed income securities generally increases. The Fund may be subject to a greater risk of rising interest rates due to the current period of historically low rates and the effect of potential government fiscal policy initiatives and resulting market reaction to those initiatives. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities. The value of the Fund's direct or indirect investments in fixed income securities may be affected by the inability of issuers to repay principal and interest or illiquidity in debt securities markets.

Fixed-Income Instruments Risks: Changes in interest rates generally will cause the value of fixed-income instruments held by the Fund to vary inversely to such changes. Prices of longer-term fixed-income instruments generally fluctuate more than the prices of shorter-term fixed income instruments as interest rates change. Fixed-income instruments that are fixed-rate are generally more susceptible than floating rate loans to price volatility related to changes in prevailing interest rates. The prices of floating rate fixed-income instruments tend to have less fluctuation in response to changes in interest rates, but will have some fluctuation, particularly when the next interest rate adjustment on such security is further away in time or adjustments are limited in amount over time. The Fund may invest in short-term securities that, when interest rates decline, affect the Fund's yield as these securities mature or are sold and the Fund purchases new short-term securities with lower yields. An obligor's willingness and ability to pay interest or to repay principal due in a timely manner may be affected by, among other factors, its cash flow.

Foreign Investment Risk: Returns on investments in foreign stocks could be more volatile than, or trail the returns on, investments in U.S. stocks.

Currency Risk: Indirect and direct exposure to foreign currencies subjects the Fund to the risk that currencies will decline in value relative to the U.S. dollar. Currency rates in foreign countries may fluctuate significantly over short periods of time for a number of reasons, including changes in interest rates and the imposition of currency controls or other political developments in the U.S. or abroad.

Depository Receipts Risk: The Fund may invest in depository receipts. Investment in depository receipts may be less liquid than the underlying shares in their primary trading market.

Foreign Market and Trading Risk: The trading markets for many foreign securities are not as active as U.S. markets and may have less governmental regulation and oversight. Foreign markets also may have clearance and settlement procedures that make it difficult for the Fund to buy and sell securities. These factors could result in a loss to the Fund by causing the Fund to be unable to dispose of an investment or to miss an attractive investment opportunity, or by causing Fund assets to be uninvested for some period of time.

Foreign Securities Risk: The Fund invests a significant portion of its assets directly in securities of issuers based outside of the U.S., or in depositary receipts that represent such securities. Investments in securities of non-U.S. issuers involve certain risks that may not be present with investments in securities of U.S. issuers, such as risk of loss due to foreign currency fluctuations or to political or economic instability. There may be less information publicly available about a non-U.S. issuer than a U.S. issuer. Non-U.S. issuers may also be subject to different accounting, auditing, financial reporting and investor protection standards than U.S. issuers.

Political and Economic Risk: The Fund is subject to foreign political and economic risk not associated with U.S. investments, meaning that political events, social and economic events and natural disasters occurring in a country where the Fund invests could cause the Fund's investments in that country to experience gains or losses. The Fund also could be unable to enforce its ownership rights or pursue legal remedies in countries where it invests.

Privatization Risk: Several foreign countries in which the Fund invests have begun a process of privatizing certain entities and industries. Privatized entities may lose money or be re-nationalized.

Geographic Concentration Risk. To the extent the Fund invests a significant portion of its assets, directly or indirectly, in the securities of companies of a single country or region, it is more likely to be impacted by events or conditions affecting that country or region.

Government Obligations Risk. The Fund may invest in securities issued by the U.S. government. There can be no guarantee that the United States will be able to meet its payment obligations with respect to such securities. Additionally, market prices and yields of securities supported by the full faith and credit of the U.S. government may decline or be negative for short or long periods of time.

Market Trading Risk: An investment in the Fund faces numerous market trading risks, including the potential lack of an active market for Fund shares, losses from trading in secondary markets, periods of high volatility and disruption in the creation/redemption process of the Fund. Any of these factors, among others, may lead to the Fund's shares trading at a premium or discount to net asset value ("NAV").

Trading Issues. Although Fund shares are listed for trading on the NYSE Arca, Inc. (the "Exchange"), there can be no assurance that an active trading market for such shares will develop or be maintained. Trading in Fund shares may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in shares inadvisable. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of any Fund will continue to be met or will remain unchanged or that the shares will trade with any volume, or at all. Further, secondary markets may be subject to erratic trading activity, wide bid/ask spreads and extended trade settlement periods in times of market stress because market makers and Authorized Participants may step away from making a market in Fund shares and in executing creation and redemption orders, which could cause a material deviation in the Fund's market price from its NAV.

Fluctuation of NAV. The NAV of Fund shares will generally fluctuate with changes in the market value of the Fund's securities holdings. The market prices of shares will generally fluctuate in accordance with changes in the Fund's NAV and supply and demand of shares on the Exchange. It cannot be predicted whether Fund shares will trade below, at or above their NAV. During periods of unusual volatility or market disruptions, market prices of Fund shares may deviate significantly from the market value of the Fund's securities holdings or the NAV of Fund shares. As a result, investors in the Fund may pay significantly more or receive significantly less for Fund shares than the value of the Fund's underlying securities or the NAV of Fund shares.

Costs of Buying or Selling Shares. Investors buying or selling Fund shares in the secondary market will pay brokerage commissions or other charges imposed by brokers as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of shares.

Models and Data Risk: The Fund relies heavily on proprietary quantitative models as well as information and data supplied by third parties (“Models and Data”). When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks.

Monthly Rebalance Risk. Because the Index may only change its exposure based on data as of the last business day of each month, (i) the Index’s exposure may be affected by significant market movements at or near month end that are not predictive of the market’s performance for the subsequent month and (ii) changes to the Index’s exposure may lag a significant change in the market’s direction (up or down) by as long as a month if such changes first take effect at or near the beginning of a month. Such lags between market performance and changes to the Index’s exposure may result in significant underperformance relative to the broader equity or fixed income market.

New Fund Risk: The Fund is a recently organized, diversified management investment company with limited operating history. As a result, prospective investors have a limited track record or history on which to base their investment decision. There can be no assurance that the Fund will grow to or maintain an economically viable size.

Other Investment Companies Risk. The Fund will incur higher and duplicative expenses when it invests in other investment companies such as ETFs. There is also the risk that the Fund may suffer losses due to the investment practices of the underlying funds. When the Fund invests in other investment companies, the Fund will be subject to substantially the same risks as those associated with the direct ownership of securities held by such investment companies. Investments in ETFs are also subject to the following risks: (i) the market price of an ETF’s shares may trade above or below their net asset value; (ii) an active trading market for an ETF’s shares may not develop or be maintained; and (iii) trading of an ETF’s shares may be halted for a number of reasons.

Passive Investment Risk: The Fund is not actively managed and therefore would not sell an equity security due to current or projected underperformance of a security, industry or sector, unless that security is removed from the Index.

Tracking Error Risk: The Fund’s return may not match or achieve a high degree of correlation with the return of the Index. To the extent the Fund utilizes a sampling approach, it may experience tracking error to a greater extent than if the Fund sought to replicate the Index.

U.S. Government Securities Risk: U.S. Government securities are not guaranteed against price movement and may decrease in value. Some obligations issued or guaranteed by U.S. Government agencies and instrumentalities are supported by the full faith and credit of the U.S. Treasury. Other obligations issued by or guaranteed by federal agencies are supported by the discretionary authority of the U.S. government to purchase certain obligations of the federal agency, while other obligations issued by or guaranteed by federal agencies are supported by the right of the issuer to borrow from the U.S. Treasury. While the U.S. government provides financial support to such U.S. government agencies, no assurance can be given that the U.S. government will always do so because the U.S. government is not so obligated by law. For instance, securities issued by the Government National Mortgage Association (“Ginnie Mae”) are supported by the full faith and credit of the United States. Securities issued by Fannie Mae and Freddie Mac have historically been supported only by the discretionary authority of the U.S. government. While the U.S. government provides financial support to various U.S. government-sponsored agencies and instrumentalities, such as those listed above, no assurance can be given that it will always do so. In September 2008, at the direction of the U.S. Department of the Treasury, Fannie Mae and Freddie Mac were placed into conservatorship under the Federal Housing Finance Agency (“FHFA”), an independent regulator, and they remain in such status as of the date of this Prospectus. The U.S. government also took steps to provide additional financial support to Fannie Mae and Freddie Mac.

The total public debt of the United States as a percentage of gross domestic product has grown rapidly since the beginning of the 2008-2009 financial downturn. Although high debt levels do not necessarily indicate or cause economic problems, they may create certain systemic risks if sound debt management practices are not implemented. A high national debt can raise concerns that the U.S. government will not be able to make principal or interest payments when they are due. This increase has also necessitated the need for the U.S. Congress to negotiate adjustments to the statutory debt limit to increase the cap on the amount the U.S. government is permitted to borrow to meet its existing obligations and finance current budget deficits. Any controversy or ongoing uncertainty regarding the statutory debt limit negotiations may impact the U.S. long-term sovereign credit rating and may cause market uncertainty. As a result, market prices and yields of securities supported by the full faith and credit of the U.S. government may be adversely affected.

Performance Information

The Fund is new and therefore does not have performance history for a full calendar year. Once the Fund has completed a full calendar year of operations, a bar chart and table will be included that will provide some indication of the risks of investing in the Fund by showing the variability of the Fund's returns and comparing the Fund's performance to a broad measure of market performance. Updated performance information is available at www.bikretf.com.

Investment Adviser

ETF Managers Group LLC (the "Adviser") serves as the investment adviser to the Fund.

Portfolio Manager

Samuel R. Masucci, III, Chief Executive Officer and Chief Investment Officer of the Adviser, James B. Francis, CFA, Senior Portfolio Manager of the Adviser, and Devin Ryder, Portfolio Manager of the Adviser, have been the Fund's portfolio managers since the Fund's inception in 2018.

Purchase and Sale of Fund Shares

Individual shares may only be purchased and sold on a national securities exchange through a broker-dealer. You can purchase and sell individual shares of the Fund throughout the trading day like any publicly traded security. The Fund's shares are listed on the Exchange. The price of the Fund's shares is based on market price, and because exchange-traded fund shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (premium) or less than NAV (discount). The Fund issues and redeems shares on a continuous basis, at NAV, only in blocks of 50,000 shares ("Creation Units"), principally in-kind for securities included in the Index, and only Authorized Participants (typically, broker-dealers) may purchase or redeem Creation Units. **Except when aggregated in Creation Units, the Fund's shares are not redeemable securities.**

Tax Information

The distributions made by the Fund are taxable, and will be taxed as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an IRA or other tax-advantaged account. However, subsequent withdrawals from such a tax-advantaged account may be subject to federal income tax. You should consult your tax advisor about your specific tax situation.

Financial Intermediary Compensation

If you purchase shares of the Fund through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Fund shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.
